Professional Summary

AI & ML Engineer and Full Stack Developer with hands-on experience building AI applications, REST APIs, machine learning systems, and scalable web platforms. Proficient in Python, FastAPI, Machine Learning, LLMs, Generative AI, React, SQL, and Docker, with experience developing end-to-end AI solutions, model evaluation pipelines, and production-oriented backend systems. Experienced in building intelligent applications involving fraud detection, AI-powered automation, and real-time risk analysis, with a strong focus on performance, scalability, and practical deployment.

Skills

Languages: Python, C/C++, JavaScript, TypeScript, SQL, Bash

AI / Machine Learning: Scikit-learn, XGBoost, Random Forest, Logistic Regression

Frontend / Backend: FastAPI, REST APIs, AI Inference Pipelines, Evaluation & Testing, Model Serving

Databases: PostgreSQL, Redis, Vector Databases

Frameworks / Libraries: React, Tailwind CSS, Recharts, Pandas, NumPy

DevOps / Tools: Docker, Docker Compose, Firecrawl, Pinecone, Git, GitHub, Linux, Command Line

Soft Skills: Leadership, Teamwork, Modular Architecture, Distributed Systems Fundamentals, Scalability, Debugging, Testing

Project Work Experience

KAVACH – AI Risk Manager

Aug 2026 - Sep 2026

| *Python, FastAPI, XGBoost, Scikit-learn, PostgreSQL, Redis, React, Docker*

Github

- Hybrid AI risk-management system for fraud, chargeback, and return-fraud detection, combining **15 heuristic rules with three ML models — XGBoost, Random Forest, and Logistic Regression** which analysis **10,000+ transactions**— and a graduated ALERT → FLAG → HOLD → AUTO-EVIDENCE decision pipeline.
- Built a production-style FastAPI inference backend with PostgreSQL persistence, Redis caching, Razorpay SDK integration, and React/Tailwind dashboard, containerized through Docker Compose for reproducible end-to-end deployment.
- Designed the inference pipeline around a **<50 ms rules layer and <200 ms ML layer, targeting <250 ms p99 API latency**, with real-time false-positive tracking and modular detection engines that can independently enable fraud, chargeback, and return-fraud workflows.
- Scalability:** Architected the system around modular services, caching, independent risk engines and containerized deployment so the prototype can be extended from current testing to 100×+ transaction throughput through horizontal API scaling, asynchronous processing, distributed caching and database scaling; all the way to designed around the stated **35M daily transactions / 400–500 TPS** production-scale workload.

Education

Jaypee Institute Of Information Technology

Aug 2023 - July 2027

B.Tech, ECE

Noida

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Data Mining, Information Retrieval, Image Processing

Achievements and Certificates

- Razorpay Buildathon 2026** — Participant, developed KAVACH, an AI-based risk-management system
- Member of IEEE Student Branch, IIIT** — coordinated technical events and student initiatives across a 1500+ member community.
- Machine Learning and Deep Learning Specialization on Coursera
